SECURITY OPERATIONS CENTER · INTERNAL

90-DAY REVIEW

Stevie Kantor · Cybersecurity Analyst
Prepared September 10, 2026

EMPLOYEE	REVIEW WINDOW	REVIEWERS	SOURCES
Stevie (Steven) Kantor Cybersecurity Analyst, Cyber Ops	June 12 to September 10, 2026 (trailing 90 days)	Ryan Patrick, Director of Security Simvay Partners	Self-evaluation form (submitted Sep 09, 2026) HaloPSA tickets · PagerDuty SOC log

PART 1 · EMPLOYEE SELF-EVALUATION RESPONSES (VERBATIM)

QUESTION 01

What do you consider your most impactful contribution in your first 90 days?

I think my biggest contribution has been getting up to speed fairly quick and becoming more comfortable taking ownership of security alerts. I've been able to handle Sentinelone alerts, determine whether activity is malicious or FP, take appropriate response actions, and communicate with clients when needed to keep friction as minimal as possible. I've also begun to take more ownership of Mimecast email security, which was fairly new to me when I started.

QUESTION 02

Which project, task, or initiative do you feel added the most value to the team or organization? Why?

I'd say my work around Mimecast has added a decent amount of value. After going through and auditing the different client configs, I created a baseline/golden config that can be used as reference and almost fully automated config to set up future Mimecast clients. This helped me better understand how the different Mimecast policies and settings fit together while also creating something the company and benefit from moving forward.

QUESTION 03

Have you identified any areas in our workflows, tools, or processes where you've already made improvements or suggested changes?

One area I've noticed is that Mimecast can be difficult to reference and compare between clients since we can't be logged into multiple tenants at the same time. Since clients were also onboarded at different times, there was inconsistencies or settings that may have been overlooked. I've addressed this by auditing and creating an organized sheet to review existing client configurations. It can be used as a reference for future onboardings to help identify gaps and keep configs consistent across all of our customers.

QUESTION 04

What challenges have you overcome, and how did you approach them?

The biggest challenges have been learning new tools and processes, especially trying to understand email security. I'm someone who learns best by doing and working through things hands-on rather than just watching or being shown, so getting that experience has been important for me. I've also had to improve my communication skills, asking questions when I'm not fully sure, and knowing when an alert needs more eyes/escalated versus when I can take action myself. Building confidence in my role has been a process, but by working through alerts hands-on and learning from each situation, I feel much more confident than when I first started.

QUESTION 05

Are there any responsibilities or areas of ownership you've naturally taken on that weren't part of your original scope?

I know we all have our own areas of "focus", James with engineering, Gabe with GRC, and Shane and I with Ops. Within my ops responsibilities, I've naturally taken on more ownership around Mimecast and email security, including reviewing client configs and building a baseline for future clients. Beyond that, I've worked on and supported automation and workflow improvement to make recurring tasks more efficient.

QUESTION 06

Are there decisions you've made or supported that have directly impacted a client, stakeholder, or internal team?

I've made decisions around email security that have directly impacted clients. For example, the golden config baseline and recently ran into instances where I needed to add permitted sender addresses to ensure important verification codes were delivered to the user in time instead of being delayed or expiring, which directly resolved an issue a client was experiencing.

QUESTION 07

In what ways have you demonstrated initiative or autonomy in your work?

I've become more independent in my day-to-day work and rely less on Shane and the rest of the team than when I first started. I try to research and work through issues on my own before asking for guidance, while still knowing when something should be escalated. I've also been proactive about how to approach my work and learning tools and investigating unfamiliar alerts beyond what I initially know.

QUESTION 08

What feedback (formal or informal) have you received from team members, clients, or leadership that stood out?

One piece of feedback that stood out to me was Brian thanking me for troubleshooting Mimecast issues and helping work through client problems. I've also received positive feedback from the cyber team around becoming more comfortable taking ownership of alerts and unfamiliar issues. As I've gotten more experience, I've felt more confident working through problems independently and knowing when to ask for guidance.

QUESTION 09

Where do you feel you could have had more support or clarity in your first 90 days?

I think having more structured documentation around some of the tools and client-specific workflows early on would have helped. For example, when I first started, it wasn't always clear or easy for me to remember where to look for which clients were fully managed vs not. Some less frequent process documentation would have helped me get up to speed faster earlier when I started. Although, I do understand less frequent processes don't necessarily require documentation. I will say the SOC SOP definitely helped when I first started all the way until now.

QUESTION 10

What is one thing you wish you had done differently, and why?

I wish I had been more consistent about taking and leaving detailed notes on alerts and issues I worked through. I've learned that documenting what was found, how I investigated it, and what actions were taken makes it much easier to reference later and can also help the rest of the team if a similar issue arises.

QUESTION 11

What area or skill do you most want to focus on improving next?

I'd like to continue developing my incident handling skills and become more comfortable taking an investigation from an initial alert through resolution. I'm also interested in eventually learning more about Horizon3ai automated penetration testing capabilities and how it could be used to identify and address gaps proactively.

QUESTION 12

Are there any blockers or inefficiencies you've noticed that we should prioritize addressing as a team?

I haven't noticed any major blockers or inefficiencies. Overall, I feel like the team has a good workflow and I am continuing to become more familiar with our processes and the "why" behind what we do. As I gain more experience, I am sure I'll identify areas where we can improve, but nothing major at this point.

QUESTION 13

What do you need from leadership to continue performing at your best?

I'd like continued opportunities to take on new projects and work with different tools so I can keep building my technical skills and keep our clients happy with us. I also appreciate having the support and feedback available when I run into something unfamiliar, while still having the freedom to work through issues independently.

PART 2 · HALOPSA TICKET ACTIVITY (JUNE 12 TO SEPTEMBER 10, 2026)

TICKETS ASSIGNED 70 76 all-time since first ticket 5/28/26	SHARE OF CYBER OPS TEAM 24.1% of 291 team tickets in window	CLOSED 36 plus 23 Action1 remediated, awaiting auto-close	DISTINCT CLIENTS 17 top: Avon Lake, BMF, North Royalton

TEAM COMPARISON · CYBER OPS (ANALYSTS) TICKETS OPENED IN WINDOW		
AGENT	TICKETS	SHARE OF TEAM
Gabe Lister	103	35.4%
Stevie Kantor	70	24.1%
Unassigned	72	24.7%
Shane Goodsite	34	11.7%
Ryan Patrick / other	10	3.4%
James Hering	2	0.7%

READING THIS TABLE

Team total is 291 tickets with team = Cyber Ops (Analysts) and date opened inside the window. Gabe's count includes GRC and CISA Cyber Hygiene report tickets; Stevie's and Shane's are ops-facing (Action1 endpoint-offline, SOC events, user travel). Unassigned tickets are mostly Action1 auto-generated items not yet picked up.

PART 3 · PAGERDUTY SOC ALERT TRIAGE (SENTINELONE + CYBER INFRA SERVICES)

ALERTS TRIAGED BY STEVIE 1,092 first acknowledgement on the incident	SHARE OF HUMAN-ACKED ALERTS 62.5% of 1,747 alerts a person acknowledged	SHARE OF ALL ALERTS 36.6% of 2,982 alerts triggered in window	MEDIAN TIME TO ACK 0.8 min team median 0.8 min
---	--	--	---

TEAM COMPARISON · ALERTS FIRST-ACKNOWLEDGED, BY ANALYST

ANALYST	ALERTS ACKED	SHARE OF ACKED	SHARE OF ALL	MEDIAN ACK (MIN)	P90 ACK (MIN)	AFTER-HOURS / WEEKEND ACKS	MANUAL RESOLVES
Stevie Kantor	1,092	62.5%	36.6%	0.8	23.1	69	55
Shane Goodsite	531	30.4%	17.8%	0.8	23.9	93	11
James Hering	86	4.9%	2.9%	2.9	631.3	48	38
Gabe Lister	34	1.9%	1.1%	0.7	4.2	33	0
Other (Ryan, Mike K.)	4	0.2%	0.1%				
Total human-acknowledged	1,747	100%	58.6%	0.8			104

MONTHLY TREND · STEVIE'S SHARE OF ACKNOWLEDGED ALERTS

MONTH	ALERTS TRIGGERED	HUMAN-ACKED	ACKED BY STEVIE	STEVIE SHARE OF ACKED
Jun 2026 (from 6/18)	365	147	123	83.7%
Jul 2026	1,137	468	366	78.2%
Aug 2026	1,300	955	537	56.2%
Sep 2026 (to 9/10)	180	177	66	37.3%

METHOD AND CAVEATS

"Triaged" = the analyst who posted the first acknowledgement on a PagerDuty incident. Counts come from PagerDuty log entries (overview) for the two SOC services; 1,235 of 2,982 incidents (41.4%) were auto-resolved by the SentinelOne integration before anyone acknowledged, so they are excluded from the "human-acked" denominator. PagerDuty history for this account starts June 18, 2026, so June is a partial month. After-hours = before 8 AM, after 6 PM, or weekends, Eastern time. Time-to-ack is trigger to first acknowledgement.

PART 4 · MANAGER CONTEXT AND FORWARD FOCUS

FROM RYAN PATRICK

Stevie has taken on ownership of Mimecast email security as the primary resource, shadowing me on a current deployment and developing our golden config and gap analysis across client deployments. I want him to continue down that path and also build up knowledge on vulnerability management.

FOCUS AREA, NEXT 90 DAYS	WHERE IT STANDS TODAY
Mimecast email security (primary resource)	Owns client config audits, golden-config baseline, and gap analysis; shadowing Ryan on a live deployment; 6 email-security tickets and the Simvay link-check fix in window
Vulnerability management	Build-up area; already handles the Action1 endpoint-offline queue (32 tickets, 46% of his Halo volume) which sits under the Vuln Management category
Incident handling end to end (his stated goal)	Leads SOC triage volume at 62.5% of acknowledged alerts with 55 manual resolves; next step is owning investigations from alert through client communication and close-out
